

The library which we used in our project is "Microsoft Excel 16.0 Object Library". It was used there as part of the publishing company's customer database.

Public void OpeningFile() - a function responsible for opening a previously created file containing information about clients of a publishing company.

public void Loading() - a function responsible for loading a sheet with information about the authors and a sheet with information about institutions.

public void CreateNewSheets() - a function responsible for adding a new sheet.

public void ReadCell_clients() - a function responsible for reading data about clients(authors of books) from the workbook.

public void WriteCell_clients(string imie, string nazwisko) - a function responsible for adding information about new client(author of book) to the workbook.

public void ReadCell_institutions() - a function responsible for reading data about clients(institutions) from the workbook.

public void WriteCell_institutions(string nazwa) - a function responsible for adding information about new client(institutions) to the workbook.

public void ClosingAndSaving() - a function responsible for saving and closing workbook.
